SkinCare

A water filtration and purification system under your bathroom sink

Pure water for Healthy Skin

Why Do You Need Pure Filtered Water for Face Cleansing?

Your skin deserves the purest water for optimal health and beauty. Tap water often contains chlorine, heavy metals, and other impurities that can irritate sensitive facial skin, cause dryness, and accelerate aging. Our SkinCare system ensures every drop that touches your face is clean, pure, and beneficial for your skin's natural balance.

With the SkinCare system installation, you wash your face with pure water that helps preserve a soft texture, naturally and effortlessly – your true daily beauty secret!

Features & Innovation

Israeli Innovation

Developed with cutting-edge Israeli water purification technology, trusted worldwide for excellence in water treatment solutions.

Compact Solution

Space-efficient design that fits perfectly in any bathroom without compromising on filtration performance.

Easy Installation

Simple DIY installation with comprehensive guide. No professional plumber required - set up in under 30 minutes.

Pure Water Quality

Advanced filtration technology removes chlorine, contaminants, and impurities while preserving essential minerals for optimal skin health.

Health Benefits

Pure, filtered water promotes better hydration for your skin cells, leading to a more youthful, radiant complexion. Chlorine is known to dehydrate the skin and cause the appearance of eczema, acne and other skin irritations.

With the installation of the **SkinCare** system, you wash your face with pure water free of all chemicals, water that helps maintain good texture, soft and hydrated, naturally and easily while improving the effectiveness of your beauty treatments.

A simple gesture for natural beauty. Clean water also supports better oral health, protecting your teeth and gums from harmful contaminants found in untreated tap water.

"Using filtered water for daily skincare routines can significantly improve skin texture and reduce irritation caused by chlorine and other chemicals commonly found in tap water."

- Dr. Devin Reese, Dermatologist

3-Stage Filtration Process

1

Sediment Pre-Filter

Removes large particles, sediment, and rust from incoming water

2

Carbon Block Filter

Eliminates chlorine, chemicals, and improves taste and odor

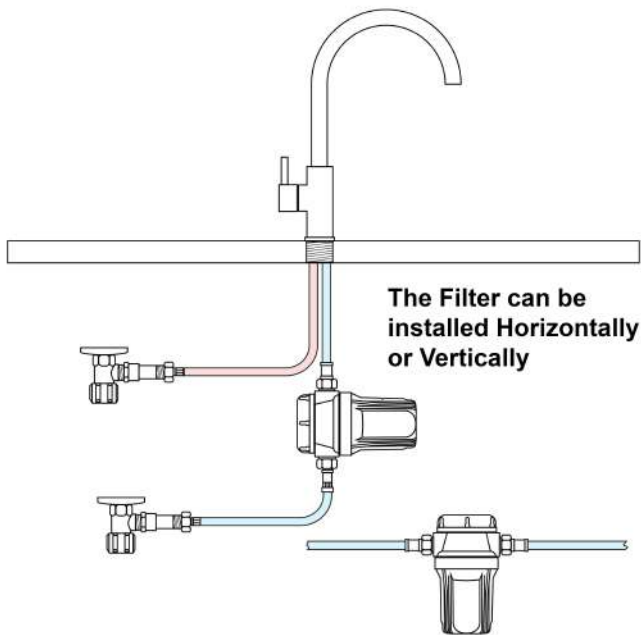

3

Final Polishing

Final filtration stage ensures crystal clear, pure water output

Installation Options

Vertical / Horizontal Installation options

Perfect for under-sink mounting with standard plumbing connections
